

OC Operations and Maintenance Service Area Storm Watch September 16, 2014

Following last week's fire in Silverado Canyon, our role is to clear the public roads and flood control facilities and protect lives and property with available resources.

We're working to provide a safe, clear passage and protect public rights of way, help you and others in the community as quickly as possible.

Steps we're taking to prepare for community assistance:

- Grading and loading equipment staged at Silverado Canyon Rd. east of Santiago Canyon Rd.
- OC Public Works has assembled 500 sand bags and 500 rice bales for distribution at the "Portola Pit" site located at 20791 El Toro Rd., Lake Forest, CA 92630 (*see picture on the back of this page*)
- 1,000 sand bags and additional traffic control resources are located at the "Modjeska Staging Area" located at Modjeska and Santiago Canyon Road (*see picture on the back of this page*)
- **Attention:** If a rain event leads to activation of the Orange County Public Works Department Operations Center, residents can pick up to **50 bags per person**. **Please make sure to bring a valid ID with you.** OC Public Works staff will be present at the Portola Pit site to assist residents.
- OC Public Works has identified potential flooding sites within County areas and has implemented appropriate measures to maintain safe passage of our County maintained roads. We will monitor these sites on an on-going basis throughout storm season.

Additional information

Residents may also obtain more information online during a disaster at www.ocstormcenter.com when the Department Operations Center (DOC) is activated.
